## Bureau of Land Management

### ALASKA FUTURES STUDY

#### I. INTRODUCTION

This document generally outlines the parameter and scope of the Futures Study. It establishes and explains the preparation process, schedules, assumptions, components and responsibilities of the effort and identifies coordination and review processes.

##### A. BACKGROUND

In the next decade the Bureau of Land Management in Alaska will face major land pattern changes as a result of State land selection, Native land selection, creation of National Parks and Wildlife Refuges and the implementation of FLPMA. BLM has a major multi-faceted interim role in transfer of these lands involving Adjudication, Cadastral Survey, and Land Records and must at the same time adjust its resource administration role to the new circumstances. BLM's total administered acreage will be substantially reduced. This will lead to work load, management and administrative adjustments, however, the nature and magnitude of these have not been thoroughly analyzed.

##### B. PURPOSE

The purpose of this study is to evaluate BLM's role in Alaska during and after these changes, project the implications in regard to BLM program direction, priority, organization, and identify alternate approaches for management to achieve agency viability, productivity, efficiency and effectiveness. (Many of the areas to be studied are mentioned in this document. Other subjects or issues will be added as suggestions and recommendations are received, in addition to those developed during the study.)

This report is primarily for use by Management/Supervisors and Staff who are directly responsible for determining work loads, staffing, organization and related support.

### C. OBJECTIVE

By October 1, 1980, complete a management analysis of BLM in Alaska, based on evaluation of (post State Selections and Alaska Native Claims Settlement including d-2) land base and resource demand, projected through a maximum of ten years and culminating in several management options.

## II. ASSUMPTIONS

Assumptions guiding the BLM-Alaska Futures Task Force are as follows.

1. The process is not to be a land planning process, however, some of the projections needed are a first cut at resource demands and uses.
2. Innovative flexibility is to be used.
3. Additions, changes or adjustments will be assessed in relationship to the new directions indicated by laws, Executive Orders, programs and related criteria.
4. A wide variety of projections will be made.
5. Existing sources of resource inventory data will be one of the bases for the analysis. Primary inventory will not be done.
6. Input from all employees will be sought.
7. Ideas from outside sources will be invited while maintaining a quiet profile.
8. Assessment of responsibilities will be based on actual land status or projected land status state-wide after d-2 legislation, and passage of title under the Statehood Act and Alaska Native Claims Settlement Act (ANCSA). If d-2 legislation is not passed, the initial point will be a projection of Antiquity Act withdrawals, additional withdrawals under Secs. 204 C and E of the Federal Land Management Policy Act (FLPMA), and actual and projected passage of title under the Statehood Act or ANCSA.
9. Projections of programs and functions will be made with emphasis on transition from present through the future decade.
10. Conclusions will provide several management options.

### III. EXISTING SITUATION

This section is strictly factual and is intended to clearly state current (post d-2 era) data on the organization, programs, authorities, issues and the resource base. This will serve as a base and a reference point from which projections will be made.

Programs will be separated - identifying those which involve land management, and those which are support. Programs will also be related to specific geographic land areas or responsibilities involved.

#### A. PRESENT ORGANIZATION

1. Washington Office
  - Staffing Charts
  - Narrative describing reasons, objectives, and philosophy of their present organizational structure.
2. State Office
  - Staffing Charts
  - ADP printout of jobs and people
  - Narrative, relating to the State Office responsibilities regarding statewide programs as discussed in Part C below.
3. District Offices
  - Staffing Charts
  - Map of boundaries
  - Narrative, relating to the District responsibilities regarding statewide programs as discussed in Part C below.
4. Resource Area Offices
  - Staffing Charts
  - Maps of boundaries
  - Narrative, relating to the Area responsibilities regarding statewide programs as discussed in Part C below.

#### B. AUTHORITIES AND MANDATES

A general summary of major authorities that direct most of our present work will be included. Recognition of instances where some jobs such as land transfer will eventually end, as others increase, will be made. This section will also identify known or potential policy problem areas of confusion, and conflicts in authorities, such as:

# 1. Authorities and Delegations

- FLPMA (Federal Land Planning Management Act)
- ANCSA (Alaska Native Claims Settlement Act)
- State Hood Act
- Mineral Leasing Laws
- 1973 Amendment to the Mineral Leasing Act of 1920
- NEPA (National Environmental Policy Act)
- Wild and Scenic Rivers
- Others such as Policy and Guidance, etc.

# 2. Mandates

BLM has been given the authority to do many jobs. However, in addition to the authority there are mandates to perform certain functions. These tasks which must be performed and their time limits will be presented.

NOTE: These will be based on previous planning analyses including those of NPR-A (National Petroleum Reserve-Alaska), Corridor, Southcentral and Fortymile and the F/SLUPC (Federal/State Land Use Planning Commission). These will be supplemented by interviews with the Solicitor, WO-BLM, DSC (Denver Service Center), Interior Department staff, etc.

## C. PROGRAMS

These programs are mostly funded sub-activities shown in the Program Outlook Guides (POG) and Annual Work Plan (AWP). Also included are other major areas of work which may be funded from one or more sub-activities or other "near" programs which are not recognized sub-activities yet.

Data needs include such things as type of staffing, work months and management priorities, when they are used.

Authorities for the programs will be identified, and cross referenced to the above authorities section.

# 1. Resource and Support Programs

- a. Energy Minerals
- b. Non-Energy Minerals
- c. Land and Realty (This is a many faceted area including keeping of land title records for all Public Lands)
- d. Forest Management
- e. Range Management
- f. Recreation Management

- g. Soil, Water, Air Management
- h. Wildlife Habitat Management
- i. Fire Management
- j. Planning
- k. Data Management
- l. Cadastral Survey
- m. Resource Protection (Administrative and law enforcement)
- n. Program Services (Others not elsewhere listed such as personnel, contracting, etc.)
- o. Construction
- p. Maintenance
- q. Special Projects (Including Southcentral Water Study, Futures Study, etc.)
- r. Communications Equipment and Services
- s. Alaska Pipeline Office
- t. OCS

## 2. General Programs

- a. Public Affairs
- b. Environmental Quality
- c. Equal Employment Opportunity
- d. Remote Sensing and Cartography
- e. Youth Programs
- f. Administrative Programs

## 3. Interim Management on State and Native selected lands

### D. BLM ADMINISTRATIVE RESPONSIBILITY ON NON-BLM LANDS

These jobs are generally required by law and are a major work load. It should be mostly narrative and may require a few maps. The following is a partial listing of items:

- Mineral Leasing on Wildlife Refuges
- Residual ANCSA - Easement Management
- Fire-Native Lands
- Pipeline Rights-of-way
- Subsurface Land Estates
- National Forest Lands
- Cadastral Survey

### E. ISSUE IDENTIFICATION

Issues affecting BLM will be developed by the Study Team in cooperation with:

- 1. USDI (U.S. Department of Interior)
- 2. BLM-WO, Division of Management Research
- 3. BLM-Alaska, State and District Offices
- 4. Public, Interest Groups, and Users

The basic process to identify issues that should be considered will center on the following: written requests, recommendations and suggestions, individual meetings, review of preparation plan and scoping outline, and possible workshops with Districts and ASO.

F. IMPLICATIONS OF DEPARTMENT AND d-2 AGENCY'S  
POLICIES IN GENERAL

Policies in relation to BLM, i.e. planned facilities, staffing, overlapping land exchange concerns, i.e. Area of Ecological Concern, etc. The objective of this section is to establish a basic understanding of the current resource administration circumstances in the State.

G. RESOURCE DATA BASE

This section will depict the resources on the lands that BLM will retain, and, in addition, other work which by law BLM is obligated to accomplish on non-BLM lands.

1. Statewide (BLM lands - generalized)

- a. Current Land Status (post d-2). This will take several maps (suggest series "E" scale, USGS) showing history of massive land transfers now in progress and the land it appears BLM will be managing afterwards. Summary maps can be prepared from existing sources.
- b. Statewide Resources. This will be a generalized overview using small scale maps (possibly page size). It should give the reader a reasonable background of the states resources. Values will be described in relative terms e.g. high, medium and low, etc., and narratives are to be short.

(1) Renewable Resources

(a) Major Wildlife.

- Includes subsistence, sport hunting and non-consumptive species:

- Caribou
- Moose
- Brown/Grizzly Bear
- Dall Sheep
- Peregrine Falcons, Hawks and Eagles
- Waterfowl
- Polar Bear, and Marine Mammals
- Fur bearers

(b) Major Fisheries

- Includes commercial, sport and subsistence species

(c) Recreation and Related

- Scenic
- Natural
- Historic
- Wilderness
- Archeological

(d) Vegetation and Soils

- Agriculture Lands
- Livestock Ranges (including reindeer and muskox)
- Timber

(2) Non-Renewable

(a) Minerals and Energy

- Oil and Natural Gas
- Coal
- Hydroelectric
- Geothermal
- Metaliferous Minerals
- Sand, Gravel and Related

2. Regionwide

This relates to resources and land patterns.

- a. Actual and projected BLM land holdings and the identified high value resources are referred to in this section. This information needs to be as specific as possible using the 1:1,000,000 scale maps and more detailed resource information than that shown in the previous generalized Statewide data section.

- b. The current Statewide Regional Profile Inventory Atlas will be used along with other existing source data. Emphasis needs to be given to those areas where BLM will be involved.

(1) Renewable Resources

(a) Major Wildlife

- Includes subsistence, sport considerations and non-consumptive species:
- Caribou
- Moose
- Brown/Grizzly Bear
- Dall Sheep
- Polar Bear and Marine Mammals
- Peregrine Falcons, Hawks and Eagles
- Waterfowl
- Fur bearers

(b) Major Fisheries

- Includes commercial, sport and subsistence species.

(c) Recreation and Related

- Scenic
- Natural
- Historic
- Wilderness
- Archeological

(d) Agriculture and Timber

- Agriculture
- Domestic livestock (including reindeer and muskox)
- Timber

---

(2) Non-Renewable

(a) Minerals and Energy

- Oil and Natural Gas
- Coal
- Hydroelectric

- Geothermal
- Metaliferous Minerals
- Sand, Gravel and Related

NOTE: Wherever possible data will be presented in charts or tables since there will be many items to consider.

#### IV. ANALYSIS, SYNTHESIS AND EVALUATION

At this point the focus shifts from resource data set out in the previous section, to projection of needs and demands through the next decade. Questions of concern include: who the future users will be, what are the trends in use, what kind of demands may be placed on resources and what are the problems anticipated.

##### A. LEGISLATED DEMANDS

This section will analyze the jobs and workload established by Congressional mandates.

##### B. ANALYSIS OF d-2 LEGISLATION

This could be included in A above, however, because of its importance the subject is given separate treatment. The analysis will focus on those specific provisions of Alaska conservation bills which will affect lands remaining under BLM Management.

##### C. DEMANDS FOR OR PLACED ON RESOURCES

1. Statewide summary of resource demands and their effect on BLM lands and programs. This will include both non-resource programs and activities on lands managed by other agencies.

- Subjects inventoried in Section III C through G will be covered.

2. Region-by-region distribution of resource demands and their effect on BLM lands and programs. This will include both non-resource programs and activities on lands managed by other agencies.

- Subjects inventoried in Section III C through G will be covered.

## D. EVALUATION OF PRIORITIES

### 1. Regional

All data and information gathered under Sections III and IV, this section, will be analyzed on a region-by-region basis. (Ultimately these will also be evaluated by Area, District and Statewide). Problems and issues will be assigned a value in accordance with relevance, nature, urgency, and magnitude. Short and long-range relevance, local and national views, status and plans will be a part of the criteria and include:

- a. Energy development.
- b. Threatened or endangered species.
- c. Miscellaneous urgencies.
- d. Mandates, requirements, needs, uses and pressures.
- e. Rankings such as levels, densities, sizes, quantities, qualities, and values.
- f. Economic, sociological and public/political demands and pressures.
  - Distribution of these pressures
- g. National, State and local trends.
- h. Overriding, minimizing or negating factors.

### 2. Synthesis of Area, District and Statewide Priorities.

After the above detailed Regional evaluation, these priorities will be restructured to show similarities, differences and uniques between Areas and Districts. These results will then be re-evaluated to analyze significant impacts on a statewide basis. Categories which will be synthesized are to include those listed under paragraph one above, and will also include program priority needs such as resource inventories, studies and research, conflict resolution, and land planning.

## E. ADMINISTRATIVE ANALYSIS

1. Based on the prioritization evaluations in (D) above, management implications will be analyzed in relation to present organizational program capability and in regard to the following subjects, e.g.:

- a. Workload
  - b. Staffing and skills
  - c. Recruiting and turnover
  - d. Workmonths, funds and ceilings
  - e. Training
  - f. Travel
  - g. Transportation
  - h. Contracting and Procurement
  - i. Organization
  - j. Jurisdictions
  - k. Facilities
  - l. Equipment
  - m. Materials
  - n. Evaluations
  - o. Employee and public relations, and internal and external communications.
2. In turn, the implications of projected needs will be portrayed against current capabilities. This section will analyze administrative implications that will describe the major portion of significant criteria from which future management assumptions will be developed.

## V. FUTURES MANAGEMENT OPTION SCENARIOS

### A. PRE-OPTION MANAGEMENT ASSUMPTION DEVELOPMENT

1. A key to the development of management scenarios is the identification of sets of assumptions from which individual scenarios can be formulated. It is expected that differing viewpoints, priorities and projections will lead to varying assumptions regarding BLM administrative needs in the next decade. This is an area where all employee input is needed.
  - Items to consider include, for example, management policy of the Interior Department, workmonths (WM) and funds to support BLM-Alaska programs, degree of intensity, and the priority assigned to BLM-Alaska in relation to BLM-nationwide needs.
2. This is an appropriate subject for the Organizational Development (OD) meetings at Kenai in April 1980. For example:
  - a. The purpose shall be to develop assumptions, upon which to build various Future Management/ Alternative Scenarios.

- b. In advance of the OD meeting and to facilitate discussion and approaches, the Futures Task Force will identify and define some of the generalized areas that are expected to be of major influence on the future of BLM in Alaska.
- c. Attendees will be expected to bring all other employee recommendations and minority ideas for consideration.
- d. This group will then develop assumptions establishing parameters, that reflect the purpose, objectives, goals and needs which will be important to accomplish the programs and plans of BLM in Alaska during the coming post d-2 era in the future decade.

B. MANAGEMENT OPTION SCENARIO DEVELOPMENT

- 1. It is not known at this time the form or type of presentation which might realistically describe alternatives that emerge from the above planned assumption development and this overall study. It is anticipated, however, that within the FLPMA, several scenarios of management options or alternatives are expected to be developed from this overall study based on logic and reason.
- 2. The above described methodology envisions that all of the final options will be the direct result of input and review by all levels of employees including management.
- 3. Each scenario is anticipated to contain the results of analysis as a corresponding companion package, including projections such as:
  - a. Phases, including length and value expectancies, of programs and functions.
  - b. Area and District boundaries, and office locations.
  - c. Organizational structures.
  - d. Funds, workmonths, and ceilings.
  - e. Numbers of employees and types of skills, training and recruitment.
  - f. Workloads.
  - g. Facilities.

- h. Other special management concerns including housing, bush and field situations, employee turnover, training, recruitment, evaluations, travel, transportation, contracting and procurement.
- i. Employee and public relations, and internal and external communications.
